

Azuga DriveSafe™

Monitor and prevent distracted driving in your fleet vehicles.

Eliminate cell phone use behind the wheel to protect your business, workers and vehicles.

Azuga DriveSafe is an award-winning technology that uses the Azuga OBD-II tracking device coupled with the Azuga Fleet mobile app to monitor and even block drivers from using their smart phones to call, email, text, use apps or browse the web while driving. The application is easy to setup, customize, and manage via a secure web portal.

THE HIGH COST OF DISTRACTED DRIVING

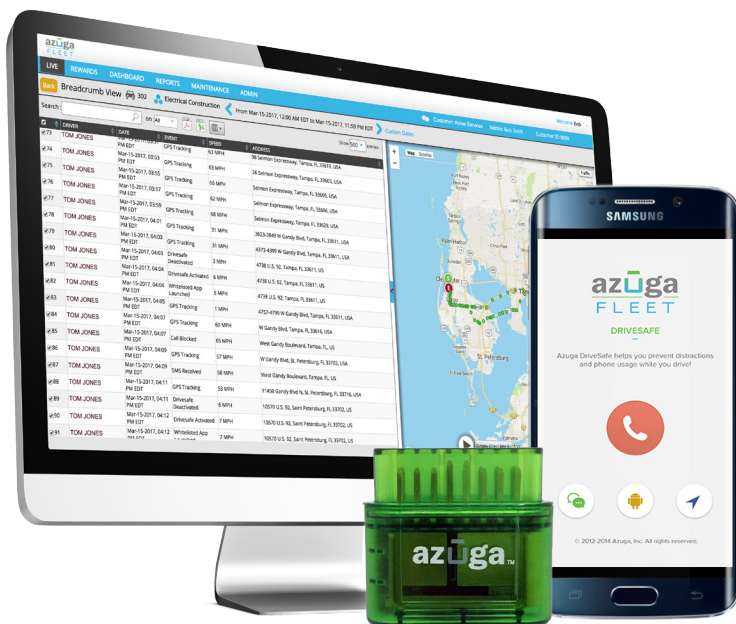

Drivers are 4X more likely to crash when using a cell phone while driving. The results of several multi-million dollar lawsuits find employers liable for distracted driving by their workers and that simply having a policy against cell phone use while driving is insufficient legal protection.

Easy to Use!

- STEP 1:** Define and customize your mobile device usage policy; system sends prompts to mobile devices to download the Azuga Fleet mobile app.
- STEP 2:** Install Azuga's OBD-II device in each vehicle and pair with the mobile device using BlueTooth
- STEP 3:** Block unauthorized activity! Azuga DriveSafe automatically enforces your company policy for use of mobile devices while driving.

Features

- Monitor the use of email, texting and apps on iPhones and Android devices (blocking use available on Android devices)
- Custom policies specific for each driver allow access for specified phone numbers, handling of calls when on a headset, and ability to use specific apps (including navigation)
- For blocked calls, callers receive a text message stating that the person is driving and to call back.
- Managers view reports of cell phone use in breadcrumb reports, with time and date stamps for each instance.

“What I use most—that I absolutely love—is the distracted driving app! I think it's the gold standard.”

Hank Levesque, Fleet Manager, APG Electric
